Unanet v.22.1.6 Final Assessment Release Notes

Purpose

You may encounter some issues while in the Final Assessment. This document provides information on known issues and provides suggestions and workarounds where applicable.
If you encounter any other issues, please inform the developer so the product can be improved.

Global

- **Page Flicker (Severity: Low)**
  You may notice a brief "flicker" of another page showing before the intended page loads when switching back from the *Web Mail* tab. There is no fix for this, as it is a visual delay during the page transition.

- **Scrollbar Offset (Severity: Low)**
  You may notice an offset with the scrollbar on certain pages. While the scrollbar is functional, dragging the track may not align perfectly with your mouse cursor. As a workaround, it's recommended that you use your mouse scroll wheel for smoother navigation on pages with a scrollbar.

Login Page

- **Page Loading Delays (Severity: Low)**
  You may notice a small delay in this page loading when switching back from the *Web Mail* tab. There is no fix for this. This is simply a visual delay in the web page display.

Time - Current Timesheet Page

- **Input Fields Hiding (Severity: Low)**
  On the *Time - Current Timesheet* page, you may notice the input fields disappearing one at a time as you switch to the *Web Mail* tab. There is no fix for this. This is simply a visual delay in the web page display.

- **Page Loading Delays (Severity: Low)**
  You may notice a small delay in this page loading when switching back from the *Web Mail* tab. There is no fix for this. This is simply a visual delay in the web page display.

My Preferences - Password Tab

- **Page Loading Delays (Severity: Low)**
  You may notice a small delay in this page loading when switching back from the *Web Mail* tab. There is no fix for this. This is simply a visual delay in the web page display.
